PROFESSIONAL SUMMARY

Data Analyst with hands-on experience in business reporting, sales analysis, demand forecasting, and A/B testing. Skilled in Python and SQL for data analysis and Excel for reporting, with practical exposure to Generative AI tools for building automation workflows that reduce manual reporting effort. Experienced in turning raw data into actionable insights that support pricing, marketing, and expansion decisions.

WORK EXPERIENCE

Data Analyst Executive — Purple United Kids

Nov 2025 – Present

Data Analytics & Reporting

- Prepared recurring business reporting and MIS summaries in Excel using pivot tables and lookup functions, consolidating sales, ASP, and return-rate data across FY25–26 (98,524 units, ₹6.72 Cr gross revenue) into stakeholder-ready reports.
- Tracked ASP trends across all kids-wear brands and shared the analysis with the discounting team to guide markdown decisions, contributing to a growth in ASP from ₹455 to ₹726 (+59.6%) and a ~132% increase in daily order volume for the affected brands.
- Built a classification model in Python (scikit-learn) to flag high-return SKUs by category, price band, and size trend, and escalated alarming return-rate data to the footwear team for proactive corrective action, reducing overall return rate from 47.9% (Q1) to 26.7% (Q4) — a 44% reduction.
- Performed sales analysis and demand forecasting in Python using historical order trends to project SKU-level demand, improving inventory planning accuracy and reducing stock-out/overstock instances.
- Ran structured A/B tests on product creatives (images and listing copy) across marketplaces; the winning variants drove a 300–400% increase in sales for the tested SKUs.
- Conducted geographical demand-density analysis for quick-commerce expansion by building heatmaps of sales quantity across all four directions of the city to identify high-density zones; recommended 40 optimal dark store locations projected to increase average daily order volume by ~525–735% over current retail-store performance in those zones.

Automation & Process Improvement

- Designed and deployed Dyno Dashboard, a Power BI-style analytics dashboard with interactive KPI visualizations, enabling non-technical stakeholders to self-serve sales, return-rate, and ASP trends without manual compilation.
- Built Python-based auto-listing tools (Myntra, Shopify D2C) to pull product data via REST APIs and auto-generate marketplace listings, eliminating manual catalog entry and cutting reporting turnaround from 30+ hours to under 2 minutes (>99% reduction).
- Automated follow-up email workflows to the apparel and footwear teams for pending action items, removing the need for manual chasing and improving response turnaround.
- Automated recurring operations tasks in Python, including a Dropbox image/link fetcher and a Daily Sales Report (DSR) generator, cutting catalog and reporting update time from 2–3 hours to ~10 minutes.

Data Engineering Intern — Cognizant Technology Solutions

Mar 2025 – Jul 2025

- Built a healthcare subscriber data pipeline using ETL (Informatica PowerCenter) and SQL to extract, transform, and load subscriber records into Oracle databases with validation and error-handling checks.
- Applied SQL-based transformation logic (Expression, Router, Filter, Joiner, Union) to cleanse and standardize thousands of subscriber records for downstream reporting.
- Automated generation of personalized subscriber communications from validated data, improving onboarding efficiency and data accuracy.

TECHNICAL SKILLS

- Programming & Querying: Python (Pandas, NumPy, scikit-learn), SQL
- Reporting & Visualization: Advanced Excel (Pivot Tables, Lookups, MIS Reporting), Power BI
- Analysis Methods: Sales & Return Analysis, Demand Forecasting, A/B Testing, KPI Tracking, Geographical/Market Analysis
- Data Engineering: ETL (Informatica PowerCenter), Data Validation & Cleansing

EDUCATION

Bachelor of Technology (B.Tech), Computer Science

2021 – 2025

Noida Institute of Engineering and Technology

CERTIFICATIONS

- HackerRank: SQL (Basic)
- Udemy: SQL Basics, Data Warehouse Fundamentals, Data Modelling
